USN:4NM19CS007

CLASS: II year BE 'A'

SEMESTER: 1V

DEPARTMENT: COMPUTER SCIENCE

TITLE: Sustainable growth of village through plantation program activity.

REPORT

At present the condition of the life of people living in village is gloomy. The problem of our villagers are many and varied. A many villagers are poor and ignorant and have no basic necessity like good roads, schools and hospitals.

In recent year the central and state government have taken some step to improve the condition of villagers. We student also try to develop our villages through many programs like plantation

Ask your self some questions:

- ❖ How much land do you have for your goals?
- ❖ What species do you anticipate planting?
- ❖ For what purpose do you intended to start a plantation ?
- ❖ What requirements are these in terms of labor , supplies and equipment needed to get started ?

The global green cover has been rapidly decreasing . it is really a master of worry. Plantation on programs can be a large or small . It is one of the effective remedial measures to control the air pollution . Planting sapling and plants using drip irrigation. Digging the deep trenches to protect from animals. Daily monitoring to avoid unforeseen mishaps .

Having the villagers involved would help in terms of each villagers planting and adopting the tree sapling . We can start by getting touch with the Forest department or a government nursery in our area. And give a proposal of our intention and we wish to plant . Plantation makes village to develop in its own means . Plantation helps in:

- Clean water and natural filtration
- Carbon sequestration
- Controlled temperature
- New habitat for wild life.

Economically make villagers Atmanirbhar . Thus starting from small scale , it motivates others to the same. You can remember Thimakka. Her achievement in the field of plantation. Inspired by her , I also trying my level best try encouraging my self in plantation programs conducted by many organizations and I am happy to that .
